Chebrolu Trilokesh Venkata Uday

Data Analyst

+91 9063908991 trilokeshvenkatauday@gmail.com LinkedIn GitHub

Profile

Pursuing a BTech in Computer Science and Technology. Specializing in Data Science with a strong foundation in Data Structures and Algorithms. Proficient in Data Analytics and well-versed in machine learning and deep learning techniques. Experienced with programming languages including C, C++, Java and Python. Skilled in database management using MYSQL and Mongo DB, and passionate about applying AI to solve real-world problems. Eager to contribute technical expertise in cutting-edge projects and further enhance problem-solving abilities. Excellent teamwork and communication skills, with a drive for continuous learning and development.

Education

Bennett University **2022 - 2026**

Bachelor of Technology *CGPA: 8.9/10*

Projects

AeroBook | (Flight Ticket Booking System) GitHub Repo **July 2023 – Dec 2023**

- Designed and developed a Python-based flight ticket booking system featuring functionalities like ticket booking, cancellation, and feedback management.
- Integrated PDF generation using the ReportLab library to create professional, customized tickets with watermarks
- Implemented secure email notifications for booking confirmations, cancellations, and feedback communication using smtplib with SSL encryption.

Liquify | (Recommendation System) GitHub Repo **Dec 2023 – Mar 2024**

- Designed and implemented a dynamic recommendation engine using Machine Learning algorithms.
- Developed an interactive user questionnaire to gather personalized preferences for tailored recommendations.
- Integrated AI-generated product videos using text-to-video synthesis to provide detailed insights into each product .

Wine Quality Analysis | (Data Analysis, Machine Learning) GitHub Repo **Jan 2023 – May 2023**

- The project focuses on analyzing wine quality by exploring its features, identifying patterns through data visualization, and building machine learning models to classify and predict quality.
- Key steps include data preprocessing (outlier removal, scaling, transformations), visualization (plots for understanding feature distributions), and implementing regression and classification models (Linear Regression, SVM) to analyze and predict wine quality.

Stock Price Prediction | (Data Analysis, Machine Learning) GitHub Repo **Jan 2023 – May 2023**

- The project preprocesses stock data by normalizing "Close" prices, splitting it into training and testing sets, and preparing it for LSTM input.
- An LSTM model is built, trained, and evaluated using metrics like RMSE, MSE, and MAE to predict future stock prices.

Technical Skills

Data Analysis, Machine Learning using Python

Data Scrapping

Big Data Analytics (Apache Spark, Hive, Hadoop

DSA using C++

DBMS using My SQL and Mongo DB

Collaborative Development using Github

Software Management

Worked with various Operating Systems

Familiar with Computer Network

Certifications

Exploratory Data Analysis for Machine Learning

Introduction to MS Excel

Business Analytics with Excel

Supervised Machine Learning: Regression
